CUTTING EXPERIENCE

## Data Sheet

## Product Code: FD-Z90

Description: Electroplated Diamond wire for marble and calcareous stone cutting in quarry extraction - DRY CUTTING or WET CUTTING

## Dimension

The Z90 diamond bead has two different versions, the "A" with a Us Mesh 40/50 diamond and the "B" version with a UsMesh 25/30 diamond. In the following table you can find all dimension:

| Version | Diameter | Total length | Diamond <br> Length | Us Mesh <br> diamond |
| :---: | :---: | :---: | :---: | :---: |
| A | $9,9 \mathrm{~mm}$ | 9 mm | $5,7 \mathrm{~mm}$ | $40 / 50$ |
| B | $10,8 \mathrm{~mm}$ | 9 mm | $5,7 \mathrm{~mm}$ | $25 / 30$ |

Assembly: The Z90 diamond wire is normally assembled with 27 or 30 beads per meter, the difference is in the kind of machine and the material to cut. All versions are assembled on a $4,9 \mathrm{~mm}$ diameter steel rope with 61 wires, the static resistant tension is 1800 daN . We assemble this diamond wire with a clamper each 3 diamond beads (not each 5 beads as many competitors do). For the assembly you can follow this example.

```
Assembly scheme
Traditional diamond wire
Type AZ-91 28 beads per meter
